School Kit

Quelle: <http://www.worldkidneyday.org/resource/school-kit-6-11yo/>

Here you can find an educational PowerPoint presentation, adapted for children between 12 and 16 years. This presentation includes information on the kidneys, how they work and how to keep them healthy.

The slides are very graphic, it is easy to understand for children and contain only the most important aspects of each topic. For a more detailed explanation on each slide can find a description in the comments section.

School Kits on the kidney are now available at the WKD website in English, Spanish, Portuguese, Chinese and Italian.

Submit your WKD 2016 information, reports and photographs to us!

MEI Releases Video Series on How to Have A Good Future with Kidney Disease

The non-profit **Medical Education Institute (MEI)** has updated its video series *How to Have a Good Future with Kidney Disease*. The videos accompany an updated [free, downloadable slide toolkit](#) to help professionals engage people at any stage of chronic kidney disease (CKD) in slowing progression, choosing a treatment for kidney failure (when appropriate), and setting life goals. The six-part series covers coming to terms with kidney disease, what kidneys do, slowing CKD, transplant, dialysis, lifestyle, and finances. Professionals can refer patients to the videos, or use the videos themselves to learn how to present the slides.
